InfoWorks ICM   (.)

WSStructureRow

A single element (row) in a WSStructure (?guid=Innovyze_Exchange_Classes_ICM_wsstructure_html).

Methods:

- [] (Get Field)
- []= (Set Field)

[] (Get Field)

```
#[(field)] ⇒ Any
```

`EXCHANGE` , `UI`

Returns the value of the named field, which could be any data type.

```
puts struct_row['flow']
⇒ 42.01
```

Parameters

Name	Type(s)	Description
field	String	The field name.
Return	Any	The value of the field.

[]= (Set Field)

```
#[(field)]=(value) ⇒ void
```
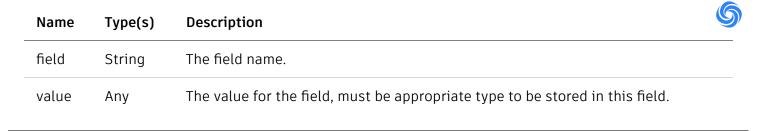

`EXCHANGE` , `UI`

Sets the value of the named field. The value's Ruby type should be appropriate for the field, e.g. a date field requires a Ruby `DateTime` object.

For any changes to be saved, the parent WSStructure.write (?guid=Innovyze_Exchange_Classes_ICM_wsstructure_html) method must be used.

```
struct_row['date_time'] = DateTime.now
struct_row['flow'] = 42.01
```

Parameters

Name	Type(s)	Description
field	String	The field name.
value	Any	The value for the field, must be appropriate type to be stored in this field.
